GROUNDWATER VULNERABILITY

KEY

Groundwater Vulnerability Classes

Five classes of vulnerability have been mapped.

Highest				Lowest
5	4	3	2	1

-2

4a - Sand and gravel cover (non-aquifer)

4c - Low permeability cover

4e - Where superficial aquifers are present

5

Appendix B Air Quality

Appendix B Annex A

Background pollutant concentrations for 2017, 2023 and 2030 (based on DEFRA 2015 Maps)

Background pollutant concentration in the vicinity of the receptor locations for Base Year 2017

Receptor Number and Name		Background Air Quality Irish Grid Reference		NO_x µg m^{-3} annual mean	NO_2 µg m^{-3} annual mean	PM_{10} µg m^{-3} annual mean
1	[redacted]	308500	325500	9.28	7.15	9.85
2	[redacted]	308500	323500	6.63	5.19	8.46
3	[redacted]	309500	324500	7.50	5.83	9.07
4	[redacted]	309500	323500	6.49	5.08	8.44
5	[redacted]	309500	322500	5.68	4.47	8.00
6	[redacted]	309500	322500	5.68	4.47	8.00
7	[redacted]	309500	322500	5.68	4.47	8.00
8	[redacted]	308500	308500	5.78	4.54	8.00
9	[redacted]	308500	322500	5.78	4.54	8.00
10	[redacted]	308500	322500	5.78	4.54	8.00

Background pollutant concentration in the vicinity of the receptor locations for Opening Year 2023

Receptor Number and Name		Background Air Quality Irish Grid Reference		NO_x µg m^{-3} annual	NO_2 µg m^{-3} annual	PM_{10} µg m^{-3} annual
1	[redacted]	308500	325500	6.94	5.41	9.54
2	[redacted]	308500	323500	5.05	3.98	8.19
3	[redacted]	309500	324500	5.70	4.48	8.80
4	[redacted]	309500	323500	4.95	3.91	8.17
5	[redacted]	309500	322500	4.36	3.46	7.75
6	[redacted]	309500	322500	4.36	3.46	7.75
7	[redacted]	309500	322500	4.36	3.46	7.75
8	[redacted]	308500	308500	4.45	3.53	7.75
9	[redacted]	308500	322500	4.45	3.53	7.75
10	[redacted]	308500	322500	4.45	3.53	7.75

Background pollutant concentration in the vicinity of the receptor locations for Design Year 2030

Receptor Number and Name		Background Air Quality Irish Grid Reference		NO_x µg m^{-3} annual	NO_2 µg m^{-3} annual	PM_{10} µg m^{-3} annual
1	[redacted]	308500	325500	5.73	4.50	9.42
2	[redacted]	308500	323500	4.19	3.32	8.07
3	[redacted]	309500	324500	4.75	3.75	8.69
4	[redacted]	309500	323500	4.11	3.26	8.06
5	[redacted]	309500	322500	3.60	2.87	7.63
6	[redacted]	309500	322500	3.60	2.87	7.63
7	[redacted]	309500	322500	3.60	2.87	7.63
8	[redacted]	308500	308500	3.71	2.95	7.63
9	[redacted]	308500	322500	3.71	2.95	7.63
10	[redacted]	308500	322500	3.71	2.95	7.63

Grid References only represent the centre point from where background air quality was estimated, they do not represent the actual receptor locations, these can be seen in this appendix for receptor details. Background Air Quality data is derived from figures produced by NETCEN, on behalf of Defra.

In accordance with DMRB, 'while the mapped background concentrations may be directly appropriate for most urban situations, there are few measurements available for rural locations. Rural background concentrations allocated to individual grid squares containing road links indicates that they may be unduly influenced by the road. It is then inappropriate to add a second contribution from the road. Where this issue is considered significant, it is recommended that concentrations are used derived from the average background concentration up to four grid squares away from either side of the road where there are no other significant sources of pollution'.

Following this advice, averages for air quality data were calculated for each of the receptors. Data was taken from the closest air quality receptor location, plus the eight closest surrounding points and averaged. Baseline and assumed year of opening data was downloaded from DEFRA website for pollutants NO2, NOx and PM10.

This spreadsheet calculates the nitrogen dioxide concentration from the modelled oxides of nitrogen concentrations

1). Confirm that the General inputs spreadsheet has been completed
The input selections are shown at the head of the Table below.
2.) Type in (or paste and copy from another spreadsheet)

1) the receptor identifier (Receptor ID) and its Easting and Northing. [Optional]
2) the modelled contribution from roads to oxides of nitrogen concentrations (Road increment NO_x)
3) the local background concentration as NO_2 (2d.p)
You may alternatively enter the local background as Nox
Leave the redundant background NO_x or NO_2 columns blank as appropriate
Note that calculations are faster if you input background NO_x rather than background NO_2

3). The default set-up is to use the fraction of oxides emitted as NO_2 from the General Inputs spreadsheet
Leave the "Fraction emitted as NO_2" column empty to use the default set up.
However, you can overwrite the defaults by typing appropriate values (0-1) into this column.
The fNO2 spreadsheet provides additional values.

4) Click the mouse on the run button to run the model.
The model will calculate:
a) the total nitrogen dioxide concentration at the receptor (Total NO_2)
b) the incremental contribution to nitrogen dioxide concentrations from the road vehicle emissions (Road NO_2)

Run NO_x to NO_2

Copy and paste the results to another spreadsheet.

5) Click the mouse on the Clear button to clear the spreadsheet

This spreadsheet calculates the nitrogen dioxide concentration from the modelled oxides of nitrogen concentrations

1). Confirm that the General inputs spreadsheet has been completed
The input selections are shown at the head of the Table below.
2.) Type in (or paste and copy from another spreadsheet)

1) the receptor identifier (Receptor ID) and its Easting and Northing. [Optional]
2) the modelled contribution from roads to oxides of nitrogen concentrations (Road increment NO_x)
3) the local background concentration as NO_2 (2d.p)
You may alternatively enter the local background as Nox
Leave the redundant background NO_x or NO_2 columns blank as appropriate
Note that calculations are faster if you input background NO_x rather than background NO_2

3). The default set-up is to use the fraction of oxides emitted as NO_2 from the General Inputs spreadsheet
Leave the "Fraction emitted as NO_2" column empty to use the default set up.
However, you can overwrite the defaults by typing appropriate values (0-1) into this column.
The fNO2 spreadsheet provides additional values.

4) Click the mouse on the run button to run the model.
The model will calculate:
a) the total nitrogen dioxide concentration at the receptor (Total NO_2)
b) the incremental contribution to nitrogen dioxide concentrations from the road vehicle emissions (Road NO_2)

Run NO_x to NO_2

Copy and paste the results to another spreadsheet.

5) Click the mouse on the Clear button to clear the spreadsheet

Clear spreadsheet

Site/Feature Information

Site Name: Fathom Upper
Interest Name: Lowland Meadows - (Lowland Meadow)
EUNIS Habitat: Critical loads for nitrogen are based on the EUNIS habitat classification. The EUNIS classes corresponding with the BAP habitat you have selected ('Lowland Meadow ') are listed in the box below. Therefore please select below the EUNIS class that best fits the particular habitat type at the SSSI you have selected. If you have more detailed habitat classification at your site (e.g. NVC class) you can use the **habitat correspondence table (http://www.jncc.gov.uk/files/NBNdictionary_habitat_correspondances_20080205.zip)** to look up the corresponding EUNIS class. If you do not have this information, then for the purpose of a screening assessment, you are advised to select the first habitat in the list which is the most

sensitive.

You can find out more information on interest feature(s) at your selected A/SSSI by using the country agency websites - **NIEA, (http://www.ni-environment.gov.uk/protected_areas_home/new_assi_landing_page.htm) SNH (http://gateway.snh.gov.uk/portal/page?_pageid=53,910284,53_920284&_dad=portal&_schema=PORTAL) , Natural England, (http://www.sssi.naturalengland.org.uk/Special/sssi/search.cfm) & CCW (http://www.ccw.gov.uk/interactive-maps/official-maps-search.aspx)**

Select a EUNIS Habitat: E2.2: Low and medium altitude hay meadows

[Note: Habitats in the select menu above may give the same nitrogen and acidity values]

Impacts and Critical Loads | **Deposition & Critical Load Graphs** | **Source Attribution**

Nutrient Nitrogen

Habitat sensitive to Nitrogen? Yes
Relevant Nitrogen Critial Load Class: Low and medium altitude hay meadows ⓘ

Empirical Critical Loads: 20-30 kg N/ha/yr
Uncertainty in these values? expert judgement
EUNIS ecosystem class: E2.2
Exceedance Impacts: Increase in tall grasses, decrease in diversity.

Acidity

Habitat sensitive to Acidity? Yes

Acidity Class: Calcareous grassland (using base cation) ⓘ
Exceedance Impacts: Leaching will cause a decrease in soil base saturation, increasing the availability of Al3+ ions; mobilisation of Al3+ may cause toxicity to plants and mycorrhiza; may have direct effect on lower plants (bryophytes and lichens).

Assessment of Designated Ecological Sites

Method for Assessing NO_x Concentrations & Nitrogen Deposition Rates

Fathom Upper — Irish Grid Ref: 250890, 409670

Low and Medium Altitude Hay Meadow

STEP 1

Obtain total average N deposition for 5km grid square (data derived from APIS website).

N Deposition data source for year 2012-2014 (3 year average). This is taken to be equivalent to those in 2013 (Data provided by Centre for Ecology and Hydrology, Edinburgh).

2013	
19.68	kg N/ha^{-1}/year^{-1}

N Deposition Rates should be reduced by 2% per year to estimate deposition rates for assessment years

N Deposition Rate equivalent to year 2014	19.5 kg N/ha^{-1}/year^{-1}
N Deposition Rate equivalent to year 2015	19.1 kg N/ha^{-1}/year^{-1}
N Deposition Rate equivalent to year 2016	18.7 kg N/ha^{-1}/year^{-1}
N Deposition Rate equivalent to year 2017	18.3 kg N/ha^{-1}/year^{-1}
N Deposition Rate equivalent to year 2018	18.0 kg N/ha^{-1}/year^{-1}
N Deposition Rate equivalent to year 2019	17.6 kg N/ha^{-1}/year^{-1}
N Deposition Rate equivalent to year 2020	17.3 kg N/ha^{-1}/year^{-1}
N Deposition Rate equivalent to year 2021	16.9 kg N/ha^{-1}/year^{-1}
N Deposition Rate equivalent to year 2022	16.6 kg N/ha^{-1}/year^{-1}
N Deposition Rate equivalent to year 2023	16.2 kg N/ha^{-1}/year^{-1}

N Deposition Critical Loads for Hay Meadows (APIS)

Low and Medium Altitude Hay Meadows — 20 - 30 kg N/ha^{-1}/year^{-1}

STEP 2

Obtain background NO_x and NO_2 Concentrations (using same method as local assessment)

	NO_x	
*(Not Adjusted) 2017 value =	5.057	µg/m^3
*(Not Adjusted) 2023 value =	3.94	µg/m^3
	NO_2	
*(Not Adjusted) 2017 value =	3.99	µg/m^3
*(Not Adjusted) 2023 value =	3.13	µg/m^3
NO_x Critical level =	30.00	µg/m^3

Background concentrations were obtained for 1km squares up to 4km from road so that the road contribution is not double counted.

*adjusted after DMRB screening s'sheet

STEP 3

Estimate dry deposition of NO_2. Scaling Factor = 1µg/m^3 of NO_2 = 0.1 kg N/ha^{-1}/year^{-1}

Dry deposition of NO_2 in a transect near the road		Road increment to NO_2 dry deposition		Total deposition rate	
0.41	kg N/ha^{-1}/year^{-1}	-0.02	kg N/ha^{-1}/year^{-1}	18.32	kg N/ha^{-1}/year^{-1}
0.40	kg N/ha^{-1}/year^{-1}	-0.03	kg N/ha^{-1}/year^{-1}	18.31	kg N/ha^{-1}/year^{-1}
0.40	kg N/ha^{-1}/year^{-1}	-0.03	kg N/ha^{-1}/year^{-1}	18.31	kg N/ha^{-1}/year^{-1}
0.40	kg N/ha^{-1}/year^{-1}	-0.03	kg N/ha^{-1}/year^{-1}	18.31	kg N/ha^{-1}/year^{-1}
0.40	kg N/ha^{-1}/year^{-1}	-0.03	kg N/ha^{-1}/year^{-1}	18.31	kg N/ha^{-1}/year^{-1}

Dry deposition of NO_2 in a transect near the road		Road increment to NO_2 dry deposition		Total deposition rate	
0.32	kg N/ha^{-1}/year^{-1}	-0.02	kg N/ha^{-1}/year^{-1}	16.23	kg N/ha^{-1}/year^{-1}
0.32	kg N/ha^{-1}/year^{-1}	-0.02	kg N/ha^{-1}/year^{-1}	16.22	kg N/ha^{-1}/year^{-1}
0.31	kg N/ha^{-1}/year^{-1}	-0.03	kg N/ha^{-1}/year^{-1}	16.22	kg N/ha^{-1}/year^{-1}
0.31	kg N/ha^{-1}/year^{-1}	-0.03	kg N/ha^{-1}/year^{-1}	16.22	kg N/ha^{-1}/year^{-1}
0.31	kg N/ha^{-1}/year^{-1}	-0.03	kg N/ha^{-1}/year^{-1}	16.22	kg N/ha^{-1}/year^{-1}

Dry deposition of NO_2 in a transect near the road		Road increment to NO_2 dry deposition		Total deposition rate	
0.52	kg N/ha^{-1}/year^{-1}	0.18	kg N/ha^{-1}/year^{-1}	16.42	kg N/ha^{-1}/year^{-1}
0.37	kg N/ha^{-1}/year^{-1}	0.03	kg N/ha^{-1}/year^{-1}	16.26	kg N/ha^{-1}/year^{-1}
0.32	kg N/ha^{-1}/year^{-1}	-0.02	kg N/ha^{-1}/year^{-1}	16.23	kg N/ha^{-1}/year^{-1}
0.32	kg N/ha^{-1}/year^{-1}	-0.02	kg N/ha^{-1}/year^{-1}	16.22	kg N/ha^{-1}/year^{-1}
0.32	kg N/ha^{-1}/year^{-1}	-0.02	kg N/ha^{-1}/year^{-1}	16.22	kg N/ha^{-1}/year^{-1}

Dry deposition of NO_2 in a transect near the road		Road increment to NO_2 dry deposition		Total deposition rate	
0.48	kg N/ha^{-1}/year^{-1}	0.14	kg N/ha^{-1}/year^{-1}	16.34	kg N/ha^{-1}/year^{-1}
0.36	kg N/ha^{-1}/year^{-1}	0.02	kg N/ha^{-1}/year^{-1}	16.27	kg N/ha^{-1}/year^{-1}
0.32	kg N/ha^{-1}/year^{-1}	-0.02	kg N/ha^{-1}/year^{-1}	16.23	kg N/ha^{-1}/year^{-1}
0.32	kg N/ha^{-1}/year^{-1}	-0.02	kg N/ha^{-1}/year^{-1}	16.22	kg N/ha^{-1}/year^{-1}
0.32	kg N/ha^{-1}/year^{-1}	-0.02	kg N/ha^{-1}/year^{-1}	16.22	kg N/ha^{-1}/year^{-1}

Obtain the average NO_2 concentration for 5km grid square

(data derived from information provided by DEFRA website)

0.43	kg N/ha^{-1}/year^{-1} (2017)
4.28	µg/m^3 (2017)
0.34	kg N/ha^{-1}/year^{-1} (2023)
3.4	µg/m^3 (2023)

* See Footnote 32 in DMRB Volume 11 Chapter 3

This spreadsheet calculates the nitrogen dioxide concentration from the modelled oxides of nitrogen concentrations

1). Confirm that the General inputs spreadsheet has been completed
The input selections are shown at the head of the Table below.
2.) Type in (or paste and copy from another spreadsheet)

1) the receptor identifier (Receptor ID) and its Easting and Northing. [Optional]
2) the modelled contribution from roads to oxides of nitrogen concentrations (Road increment NO_x)
3) the local background concentration as NO_2 (2d.p)
You may alternatively enter the local background as Nox
Leave the redundant background NO_x or NO_2 columns blank as appropriate
Note that calculations are faster if you input background NO_x rather than background NO_2

3). The default set-up is to use the fraction of oxides emitted as NO_2 from the General Inputs spreadsheet
Leave the "Fraction emitted as NO_2" column empty to use the default set up.
However, you can overwrite the defaults by typing appropriate values (0-1) into this column.
The fNO2 spreadsheet provides additional values.

4) Click the mouse on the run button to run the model.
The model will calculate:
a) the total nitrogen dioxide concentration at the receptor (Total NO_2)
b) the incremental contribution to nitrogen dioxide concentrations from the road vehicle emissions (Road NO_2)

Copy and paste the results to another spreadsheet.

Run NO_x to NO_2

5) Click the mouse on the Clear button to clear the spreadsheet

GAZETTEER OF HERITAGE ASSETS

Y = Within 300m route option – initial assessment of potential impact.

S = Within 1km of route option – initial assessment of potential setting impact.

N = No initial assessment of potential physical or setting impact.

SMR No.	Description	Long description	Type	Date	Grid Ref	Townland	Blue 1	Blue 2	Blue 3	Red	Yellow
DOW 046:500 & ARM 029:500	Newry Canal Reach 1A	NEWRY CANAL (Co. Armagh) This number covers the portion of Newry Canal in Co. Armagh - c.f. DOW 046:500 for the portion in Co. Down. The Canal is an IHR site [IHR 172], given an SMR no. as part of the scheduling process. NEWRY CANAL (Co. Down) This number covers the portion of Newry canal that is in Co. Down - ARM 029:500 covers the portion in Armagh. This is an IHR site which has been given an SMR no. as part of the scheduling process. An archaeological evaluation was carried out on works situated at the former entrance to a canal basin on the Newry Canal. The area was covered with modern overburden up to 1.7m deep immediately overlying subsoil. Once this was cleared, it was obvious that the majority of the entrance to the canal basin had been removed previously. Only a small portion of the basal course remained [ADS, 2006]. 		survives intact. Along with the servant's accommodation (HB16/11/019B), Gardener's House and walled garden (HB16/11/020), Stable yard (HB16/11/021), ice house (HB16/11/043), Steward's House (HB16/11/044) old farmyard (HB16/11/045) and gate screen (HB16/11/018), it forms an important and substantial group of buildings.									
HB16/29/017A	Church	1900 - 1919 Church of the Sacred Heart (RC) Adj. to 134 Dublin Road, Newry, Co Down. An important basilica plan 20th century church in a Hiberno-Romanesque style, an architectural landmark set on a prominent elevated site. High quality contemporary interior, with fine detailing, relatively unaltered.	Listed B+	Modern, 20th century	J0820 2390	Drumalane	S	S	S	S	S
HB16/11/019B	Former Servant's Accommodat-ion to Narrow Water Castle	1700 - 1719 Former Servant's Accommodation to Narrow Water Castle Warrenpoint Road, Newry, Co Down, BT34 2PN. This building was known as Mount Hall and is believed to have been erected by Francis Hall in 1707. It was the main house prior to the erection of Narrow Water Castle, built by Roger Hall in 1835 to designs by Thomas Duff. Duff re-modelled the exterior of Mount Hall to complement the new house. Internally it was converted to servants' accommodation. This, the earliest building on the site, re-modelled in the 19th C in the Tudor style, is both of historical and architectural interest. HB16/13/069	Canal Locks	1840-1859 Victoria Locks Fathom Road Newry Co Armagh This is the largest single lock chamber in Northern Ireland. Its size reflects the importance of maritime trade to Newry and it also has associations with Sir John Rennie. This site is part of the scheduled Newry canal and is an Industrial Heritage feature (00172:041:00)	Record only	Modern, 19th century	J1083 2081	Fathom Upper					
D-041	Narrow Water Castle demesne	NARROW WATER CASTLE, Co. Down (REGISTERED SITE – AREA PLAN NEWRY & MOURNE 16). The present house was built during the years 1831 to 1837 to the designs of Thomas Duff of Newry (listed HB 16/11/19). It replaced an earlier house, known as Mount Hall (the name of the occupants), of which a wing survives. A map of 1800 shows this house with garden, grove and shrubbery, orchard, pasture, woods, and parkland trees. It is thought that Sir Joseph Paxton made plans for the Italian Garden, notable for its impressive grass terraces, balustrading, cut stone steps and urns. Horizontal ground was once filled with flower beds, remembered in photographs but now grassed. Early 20th century photographs also show the wild garden in the Pleasure Grounds to the north-west of the house, said to have been created by Thomas Smith of Newry. This is no longer maintained. Articles in garden journals at the end of the 19th century mention the garden and remarkable trees are noted in Trees of Great Britain and Ireland of 1909 and 1910. A folly summer house survives on high ground in woodland. There are extensive plantations of trees. The parkland trees are few and far between. The walled garden is not cultivated and glasshouses have gone. The Head Gardener's House (or Steward's House) is very impressively large (listed HB 16/11/20). 18th century outbuildings are listed (HB 16/11/21). Two gate lodges survive, Castle Gate	Register of Parks, Gardens and Demesnes of Special Historic Interest	Modern, 19th century		Narrow Water	N	N	N	N	N

Appendix E Assessment Summary Tables

Newry Southern Relief Road - Red Route	**Description** – A 4.00km S2/Wide Single Carriageway Climbing Lane Section links the A2 Warrenpoint Road to the A1/N1 Belfast Dublin Corridor.	**Main Constraints** – The majority of traffic currently passing through Newry converges in the centre of the city, resulting in considerable congestion.	**Total Scheme Cost (Excl. Optimism Bias) – £83.201m** **Total Scheme Cost (Incl. 36.3% Optimism Bias) – £113.404m**

<table>
<tr><th>Objective</th><th>Sub-Objective</th><th>Qualitative Impacts</th><th>Quantitative Assessment</th><th>Assessment</th></tr>
<tr><td rowspan="3">ENVIRONMENT</td><td>Air Quality</td><td>Red Route is forecasted to have a beneficial local air quality effect by removing a proportion of traffic (particularly HDVs) from the city centre, leading to less congestion and reduced pollution. Two existing AQMAs would be indirectly affected as a result of removal of some strategic traffic from the city. However, the change would likely not be significant enough to result in the AQMAs being revoked. In terms of impacts upon sensitive vegetation, the Red Route would be least preferred.
NO_2 and PM_{10} levels at each assessed receptor would be 'Well Below' the NAQS limit values and the significance of effect in all cases would be Negligible, irrespective of the absolute adverse or beneficial change concentrations. The route would however result in an increase in regional emissions.</td><td>Number of properties within 200m of indicative alignment centreline:
<table><tr><th>Centreline – 50m</th><th>50-100m</th><th>100-150m</th><th>150-200m</th><th>Total</th></tr><tr><td>10</td><td>11</td><td>15</td><td>7</td><td>43</td></tr></table></td><td>Slight Adverse – Slight Beneficial</td></tr>
<tr><td>Cultural Heritage</td><td>Red Route has the possibility of impacting upon a 1600's battle site (ARM029:042), four tree ring sites in Fathom Lower (ARM029:020; ARM029:021; ARM029:022; ARM029:023), the former lines of the Industrial Heritage Record GNR Branch Line from Goraghwood to Warrenpoint (00478) and the Newry and Greenore Railway (00538), long-established woodland of historic value at Fathom Upper (WT895) whilst also crossing the boundaries between the townland of Cloghogue with Fathom Upper.
The crossing of the Newry River may also impact upon shipwrecks in the river and upon the setting of the Newry Ship Canal (especially Victoria Lock); the bridge carrying the Barracric Road over the Belfast-Dublin railway line; and Fathom House & its associated Belvedere Tower.</td><td>Nine low value assets would be at risk of direct physical impact, as detailed under qualitative impacts.
Five assets of unknown value would be at risk of direct physical impact, including areas of palaeoenvironmental potential and the possible site of the former Wellington Inn while the river crossing could impact upon at least three recorded shipwrecks.
Has the potential to impact upon the setting of a range of heritage assets, including the Newry Ship Canal, the B+ listed Church of the Sacred Heart (and associated B1 listed gates and walling and its non-designated Parochial House), the high value B2 listed Belvedere Tower (Fathom Lower), the low value undated enclosure or 'fort' in Fathom Lower and three low value areas of historic woodland in Fathom Lower, comprising ancient woodland (WT896) and long-established woodland (WT940 & WT907).</td><td>Large Adverse</td></tr>
<tr><td>Ecology & Nature Conservation</td><td>Carlingford Shore SAC is approximately 3.5km south-east of the Red Route. A bridge approximately 480m long would traverse Carlingford Lough ASSI. Piers would be required through the estuarine sediments. Habitat connectivity between Fathom Upper ASSI and Fathom Lower Woods & Grasslands SLNCI would be fragmented. The Red Route would have major direct impacts on several SLNCIs (including very significant adverse impacts upon ancient and long-established woodland). This route also traverses agricultural land with numerous hedgerows. As Priority Habitat and important wildlife corridors, hedgerow loss would be</td><td>N/A
(Qualitative Assessment Only)</td><td>Large Adverse</td></tr>

Newry Southern Relief Road - Red Route	**Description** – A 4.00km S2/Wide Single Carriageway Climbing Lane Section links the A2 Warrenpoint Road to the A1/N1 Belfast Dublin Corridor.	**Main Constraints –** The majority of traffic currently passing through Newry converges in the centre of the city, resulting in considerable congestion.	**Total Scheme Cost (Excl. Optimism Bias) – £83.201m** **Total Scheme Cost (Incl. 36.3% Optimism Bias) – £113.404m**

Objective	Sub-Objective	Qualitative Impacts	Quantitative Assessment	Assessment
		detrimental, causing habitat fragmentation for local wildlife.		
	Landscape Effects	Slight encroachment into Mourne AONB, though the route would have a significant impact on the Ring of Gullion AONB, resulting in significant loss of mature woodland vegetation, in combination with major earthworks on the western valley side. However, the road would follow contours as much as possible. Would however require the removal of large areas of long established woodland as well as sections of ancient woodland. The bridge crossing would potentially divide the river basin and indeed the overall river valley into two parts by creating a strong visual and physical barrier when viewed from the A2. Red Route is least preferred as it would cross the river valley at its widest point resulting in maximum landscape and visual impact. The limited number of receptors would minimise visual impacts over this section of the route.	N/A (Qualitative Assessment Only)	**Landscape** Large Adverse to Very Large Adverse **Visual** Moderate Adverse to Large Adverse
	Land Use	Would not encroach into the settlement development limit as designated in the Banbridge / Newry & Mourne Area Plan 2015. Would marginally encroach into Narrow Water Forest SLNCI, but cause no severance. Would encroach into and sever the most southerly (and by far the largest) of the three parcels associated with Fathom Lower Woods & Grasslands SLNCI resulting in significant losses from this zoned area and a significant impact upon its nature conservation, setting and amenity value. All route options would traverse a similar length of agricultural land. Would not affect any designated Community areas or facilities; however, the route may affect publically accessible woodland at Fathom Forest. Would have by far the greatest impact on Forest Service woodlands and long-established/ancient woodland. Would impact the greatest amount of non-Forest Service woodland. Would include a bascule bridge over the canal to negate any restriction on ship passage.	Seven properties at risk of demolition (including six residential properties and one commercial property). Five residential properties at risk of private land loss, all being subject to minor impacts. Six planning applications at risk of direct impacts. For those that are still extant, the impact would be minor.	Slight Adverse - Large Adverse
	Noise & Vibration	Would have the lowest number of receptors, both within 50m, (the zone where noise levels would be greatest), and within 300m. Would require a significant degree of earthworks (cutting and embankments) and bridge works, though as it is not located close to the more populous part of Newry, this would be preferred.	When comparing the Do-Minimum in the Baseline Year (year of opening) with the Do-Something in the Future Year (15th Year) for the Red Route, 62 properties would experience a less than 10% increase in noise nuisance. 7 would experience a 10-20% increase in noise nuisance, and 3 would experience no change. Under this scenario, it is predicted that the 68 dB $L_{A10,\ 18hr}$ value would be exceeded at 7 properties under the 'Do-Something' scenario. It is noted that 6 of these properties would exceed this value under the 'Do-Minimum' scenario due to the	Neutral – Large Adverse

Newry Southern Relief Road - Red Route	**Description** – A 4.00km S2/Wide Single Carriageway Climbing Lane Section links the A2 Warrenpoint Road to the A1/N1 Belfast Dublin Corridor.	**Main Constraints** – The majority of traffic currently passing through Newry converges in the centre of the city, resulting in considerable congestion.	**Total Scheme Cost (Excl. Optimism Bias) – £83.201m** **Total Scheme Cost (Incl. 36.3% Optimism Bias) – £113.404m**

Objective	Sub-Objective	Qualitative Impacts	Quantitative Assessment		Assessment	
			existing road network. There are 17 properties which would be exposed to levels in excess of 55 dB $L_{night, outside}$ under the 'Do-Something' scenario in the Future assessment year.			
	Vehicle Travellers	New and interesting views would be opened-up. Currently, driver stress levels through the affected road network of Newry are considered to be 'High', and would be expected to reduce on completion of the scheme.	N/A (Qualitative Assessment Only)		Views : Moderate Beneficial Driver Stress: Moderate Beneficial	
	Road Drainage & the Water Environment	Would not directly affect any designated or known shellfishery beds. It would however traverse Carlingford Lough ASSI. Would not be located within the Q_{100} river and surface water floodplain associated with the Newry River or the Q_{200} Sea Floodplain associated with the Newry Estuary. The feeder stream to Bensons Glen Fish Hatchery would be directly affected.	N/A (Qualitative Assessment Only)		Moderate Adverse	
	Geology & Soils	Would potentially have a greater impact on soils as a result of its rural location and overall length. Would potentially have a lower potential impact on contaminated soils/groundwater.	N/A (Qualitative Assessment Only)		Slight Adverse	
ECONOMY	**Transport Economic Efficiency**	Significantly reduced peak and off-peak journey times on the road network in the 2023 year of opening compared to existing routes by avoiding the congested urban road network within Newry City Centre.	**For the Opening Year:**	**RTF 2015 Growth**	**TEE (RTF 2015 Growth)**	
			Total Vehicle-Hours Saved (Two-Way):	214,000	**Consumer PVB:**	£67.337m
			Average Journey Time Change (Mins/Veh):	8.9 mins saved on strategic route Warrenpoint to / from Carrickcarnan 3.2 mins saved on strategic route Warrenpoint to / from Camlough 6.0 mins saved on strategic route Warrenpoint to / from Carnbane 3.9 mins saved on strategic route Warrenpoint to / from Sheepbridge	**Business PVB:**	£38.340m
					Private PVB:	£0.342m
					ITR PVB:	-£1.734m
					Emissions PVB:	£0.294m
					Government	**£59.262m**

Newry Southern Relief Road - Red Route	**Description** – A 4.00km S2/Wide Single Carriageway Climbing Lane Section links the A2 Warrenpoint Road to the A1/N1 Belfast Dublin Corridor.	**Main Constraints** – The majority of traffic currently passing through Newry converges in the centre of the city, resulting in considerable congestion.	**Total Scheme Cost (Excl. Objective	Sub-Objective	Qualitative Impacts	Quantitative Assessment					Assessment	
					3.6 mins saved on strategic route Greenbank Rbt to / from Carrickcarnan -0.5 mins saved on strategic route City Centre to / from Carrickcarnan			**Funding PVC:**	
								Overall PVB	£109.498m
								Overall PVC	£59.899m
								NPV	£49.599m
								BCR	1.828
	Reliability	Improved journey time reliability through the provision of a Newry Southern Relief Road to address acknowledged operational congestion through Newry City Centre.	N/A – Qualitative Assessment Only						
SOCIAL	**Pedestrians, Cyclists & Equestrians**	Would potentially affect two alleged PROWs, (at Middlebank, and Hillhead Road), and cross the Ring of Gullion Waymarked Way. The proposed high off-road cycle and walking greenway to be developed along Middlebank would be indirectly impacted in terms of setting. Would impact on existing and proposed National Cycle Networks / Sustrans proposals. No known equestrian facilities would be directly affected. Would impact on the setting/amenity of the Ship Canal as an angling facility. Likely significant reduction in traffic on Kilmorey Street and overall reduction in rat-running.	N/A (Qualitative Assessment Only)					Slight Adverse – Slight Beneficial	
	Accidents	Significant savings in the number of accidents and the number of serious and slight casualties due to the provision of a Newry Southern Relief Road to remove traffic from the heavily trafficked junctions on the urban road network within Newry City Centre, based on the application of national accident characteristics.	**Growth**	**Accidents**	**Deaths**	**Serious**	**Slight**	**Accidents PVB (RTF 2015 Growth)**	
			RTF 2015 Growth	140.9	-0.2	13.7	161.9	£4.918m	
	Community Severance	Significant volumes of traffic would continue to be drawn into the city from all directions; however the relief of some of the traffic on the urban road network may improve access to community facilities, with a possible reduction in vehicular/pedestrian conflict due to the slight easing of congestion. The benefit of relieving some traffic and slight easing of congestion may also be experienced throughout the wider network of urban roads which have become heavily used routes by traffic wishing to avoid/bypass the congested areas. Not only may this lead to improved access to community facilities throughout the wider urban area, but also partially reduce the degree of	N/A (Qualitative Assessment Only)					Slight Beneficial	

Newry Southern Relief Road - Red Route	**Description** – A 4.00km S2/Wide Single Carriageway Climbing Lane Section links the A2 Warrenpoint Road to the A1/N1 Belfast Dublin Corridor.	**Main Constraints** – The majority of traffic currently passing through Newry converges in the centre of the city, resulting in considerable congestion.	**Total Scheme Cost (Excl. Optimism Bias) – £83.201m** **Total Scheme Cost (Incl. 36.3% Optimism Bias) – £113.404m**

Objective	Sub-Objective	Qualitative Impacts	Quantitative Assessment	Assessment
		community severance. It may also serve to encourage journeys into the city by those previously deterred by the high levels of traffic on the city roads.		
	Access to Public Transport	Access to the local road network would be maintained for local Ulsterbus services linking the surrounding towns and villages. The route would likely result in reduction in delays for public transport services through separation of local and strategic traffic to a certain degree. There would be no long-term impact upon rail services.	N/A (Qualitative Assessment Only)	Slight Beneficial
	Transport Interchange	As a long-term strategic road improvement to link from the A1 Dublin Road (a key strategic route), to the A2 Warrenpoint Road (a trunk road leading to Warrenpoint Port) the provision of a relief road to the south of Newry would provide an obvious benefit to the transport interchanges, particularly with regards to the potential for removal of a significant proportion of port-related HGV movements from the city centre road network. A maximum gradient of 6% occurs for approximately 0.3km. A significant cut from the proposed Fathom Line Roundabout to approximate chainage 0+400m would potentially require rock blasting. Significant works would be required to upgrade Flagstaff Road as the proposed route would not provide adequate clearance. This would involve raising Flagstaff Road considerably.	N/A (Qualitative Assessment Only)	Slight -Moderate Beneficial
	Land-Use Planning	Conforms to policies in the RDS, RTS and RSTNTP. Specifically, the route would help achieve the strategic aims of the RDS (2035) and conforms to its specific regional guidance; to deliver a balanced approach to transport infrastructure. The route would help maximise the potential of the RSTN, by removing bottlenecks on the key road network where lack of capacity is causing congestion and improving the environment by providing bypasses, relieving the effects of heavy through traffic. The scheme is part of the Strategic Road Improvement Programme, and is currently in DfI's 10 year Forward Planning Schedule, as of April 2015. Extensive woodland loss.	N/A (Qualitative Assessment Only)	Moderate Adverse - Moderate Beneficial
	Other Government Policies	The scheme is supported by proposals contained within the Banbridge/Newry and Mourne Area Plan 2015 and the Newry City Masterplan, which in turn are largely in conformance with other Government Department Objectives for integrated transport.	N/A (Qualitative Assessment Only)	Moderate Beneficial

Newry Southern Relief Road - Red Route	**Description** – A 4.00km S2/Wide Single Carriageway Climbing Lane Section links the A2 Warrenpoint Road to the A1/N1 Belfast Dublin Corridor.	**Main Constraints –** The majority of traffic currently passing through Newry converges in the centre of the city, resulting in considerable congestion.	**Total Scheme Cost (Excl. Newry Southern Relief Road - Yellow Route

Description – A 5.30km S2/Wide Single Carriageway Climbing Lane Section links the A2 Warrenpoint Road to the A1/N1 Belfast Dublin Corridor.

Main Constraints – The majority of traffic currently passing through Newry converges in the centre of the city, resulting in considerable congestion.

Total Scheme Cost (Excl. Optimism Bias) – £77.241m
Total Scheme Cost (Incl. 36.3% Optimism Bias) – £105.279m

Objective	Sub-Objective	Qualitative Impacts	Quantitative Assessment					Assessment	
				City Centre to / from Carrickcarnan				**NPV**	**£36.696m**
								BCR	**1.660**
	Reliability	Improved journey time reliability through the provision of a Newry Southern Relief Road to address acknowledged operational congestion through Newry City Centre.	N/A – Qualitative Assessment Only						
SOCIAL	**Pedestrians, Cyclists & Equestrians**	Would potentially affect two alleged PROWs, (at Middlebank, and Hillhead Road), and cross the Ring of Gullion Waymarked Way. The proposed high off-road cycle and walking greenway to be developed along Middlebank would be indirectly impacted in terms of setting. Would impact on existing and proposed National Cycle Networks / Sustrans proposals. No known equestrian facilities would be directly affected. Would impact on the setting/amenity of the Ship Canal as an angling facility. Likely significant reduction in traffic on Kilmorey Street and overall reduction in rat-running.	N/A (Qualitative Assessment Only)					Slight Adverse – Slight Beneficial	
	Accidents	Significant savings in the number of accidents and the number of serious and slight casualties due to the provision of a Newry Southern Relief Road to remove traffic from the heavily trafficked junctions on the urban road network within Newry City Centre, based on the application of national accident characteristics.	**Growth**	**Accidents**	**Deaths**	**Serious**	**Slight**	**Accidents PVB (RTF 2015 Growth)**	
			RTF 2015 Growth	102.4	-0.6	8.1	115.4	£3.114m	
	Community Severance	Significant volumes of traffic would continue to be drawn into the city from all directions; however the relief of some of the traffic on the urban road network may improve access to community facilities, with a possible reduction in vehicular/pedestrian conflict due to the slight easing of congestion. The benefit of relieving some traffic and slight easing of congestion may also be experienced throughout the wider network of urban roads which have become heavily used routes by traffic wishing to avoid/bypass the congested areas. Not only may this lead to improved access to community facilities throughout the wider urban area, but also partially reduce the degree of community severance. It may also serve to encourage journeys into the city by those previously deterred by the high levels of traffic on the city roads.	N/A (Qualitative Assessment Only)					Slight Beneficial	
	Access to Public Transport	Access to the local road network would be maintained for local Ulsterbus services linking the surrounding towns and villages. The Route would likely result in reduction in delays for public transport	N/A (Qualitative Assessment Only)					Slight Beneficial	

Newry Southern Relief Road - Yellow Route	**Description** – A 5.30km S2/Wide Single Carriageway Climbing Lane Section links the A2 Warrenpoint Road to the A1/N1 Belfast Dublin Corridor.	**Main Constraints –** The majority of traffic currently passing through Newry converges in the centre of the city, resulting in considerable congestion.	**Total Scheme Cost (Excl. Optimism Bias) – £77.241m** **Total Scheme Cost (Incl. 36.3% Optimism Bias) – £105.279m**

Objective	Sub-Objective	Qualitative Impacts	Quantitative Assessment	Assessment
		services through separation of local and strategic traffic to a certain degree. There would be no long-term impact upon rail services.		
	Transport Interchange	As a long-term strategic road improvement to link from the A1 Dublin Road (a key strategic route), to the A2 Warrenpoint Road (a trunk road leading to Warrenpoint Port) the provision of a relief road to the south of Newry would provide an obvious benefit to the transport interchanges, particularly with regards to the potential for removal of a significant proportion of port-related HGV movements from the city centre road network. A maximum gradient of 6% occurs for approximately 0.4km. An extremely large cut from the proposed Fathom Line Roundabout would require rock blasting. Significant works would be required to upgrade Flagstaff Road as the proposed route would not provide adequate clearance. This would involve raising Flagstaff Road considerably.	N/A (Qualitative Assessment Only)	Slight Beneficial
	Land-Use Planning	Conforms to policies in the RDS, RTS and RSTNTP. Specifically, the route would help achieve the strategic aims of the RDS (2035) and conforms to its specific regional guidance; to deliver a balanced approach to transport infrastructure. The route would help maximise the potential of the RSTN, by removing bottlenecks on the key road network where lack of capacity is causing congestion and improving the environment by providing bypasses, relieving the effects of heavy through traffic. The scheme is part of the Strategic Road Improvement Programme, and is currently in DfI's 10 year Forward Planning Schedule, as of April 2015. Extensive woodland loss.	N/A (Qualitative Assessment Only)	Moderate Adverse - Moderate Beneficial
	Other Government Policies	The scheme is supported by proposals contained within the Banbridge/Newry and Mourne Area Plan 2015 and the Newry City Masterplan, which in turn are largely in conformance with other Government Department Objectives for integrated transport.	N/A (Qualitative Assessment Only)	Moderate Beneficial
PUBLIC ACCOUNTS	**Affordability**			(Excl. Optimism Bias) – £77.241m (Incl. 36.3% OB) – £105.279m

Newry Southern Relief Road – Blue Route Option 1	**Description** – A 3.20km S2/Wide Single Carriageway Climbing Lane Section links the A2 Warrenpoint Road to the A1/N1 Belfast Dublin Corridor.	**Main Constraints** – The majority of traffic currently passing through Newry converges in the centre of the city, resulting in considerable congestion.	**Total Scheme Cost (Excl. Optimism Bias) – £40.269m** **Total Scheme Cost (Incl. 36.3% Optimism Bias) – £54.887m**

Objective	Sub-Objective	Qualitative Impacts	Quantitative Assessment					Assessment
ENVIRONMENT	**Air Quality**	Blue Route Option 1 is forecasted to have a beneficial local air quality effect by removing a proportion of traffic (particularly HDVs) from the city centre, leading to less congestion and reduced pollution. Two existing AQMAs would be indirectly affected as a result of removal of some strategic traffic from the city. However, the change would likely not be significant enough to result in the AQMAs being revoked. The route option would have minimal perceptible impact upon designated ecological sites. NO_2 and PM_{10} levels at each assessed receptor would be 'Well Below' the NAQS limit values and the significance of effect in all cases would be Negligible, irrespective of the absolute adverse or beneficial change concentrations. The route option would also result in a decrease in regional emissions.	Number of properties within 200m of indicative alignment centreline:					Slight Adverse – Slight Beneficial
			Centreline – 50m	50-100m	100-150m	150-200m	Total	
			18	8	30	51	107	
	Cultural Heritage	Blue Route Option 1 has the possibility of impacting upon historic woodland, a 'record-only' Belvedere Tower (HB16/13/009) associated with Ashton House, the former lines of the Industrial Heritage Record GNR Branch Line from Goraghwood to Warrenpoint (00478) and the Newry and Greenore Railway (00538), and the boundary between the townlands of Cloghogue and Fathom Lower. It could also impact upon the settings of the scheduled Newry Canal; the bridge carrying the Barracric Road over the Belfast-Dublin railway line; Fathom House & its associated Belvedere Tower, and the listed church at Cloghogue.	Four low value assets would be at risk of direct physical impact as detailed under qualitative impacts. Three assets of unknown value would be at risk of direct physical impact including a possible area of complex field boundaries, areas of palaeoenvironmental potential, the possible site of a 19th Century building, Wellington Inn and previously unrecorded archaeological features and deposits within greenfield areas. Blue Route Option 1 also has the potential to impact upon the setting of a range of heritage assets, including the Newry Ship Canal; the B+ listed Church of the Sacred Heart (and associated B1 listed gates and walling and its non-designated Parochial House); the high value B1 listed Fathom House and its associated high value B2 listed Belvedere Tower; the low value Record-Only Ashton House (HB16/13/028); the Industrial Heritage Record railway bridge on the GNR Main Line (00062:102:00) which is also a Record-Only Historic Building (HB16/13/013); and ancient woodland in Fathom Lower (WT940, WT943).					Large Adverse
	Ecology & Nature Conservation	Blue Route Option 1 would not directly affect Carlingford Lough ASSI, though would cross the Newry River and canal requiring several bridge piers within the wider channel. The bridging point would also likely affect the scrub habitat, riparian corridor on the canal and intertidal river bank habitat causing fragmentation. The northern-most and central parcels of the Fathom Lower Woods & Grassland SLNCI complex would be directly affected. Blue Route Option 1 would have a major impact on the woodland habitat as it would traverse long-established woodland and adjoining undesignated woodland within the central section of Fathom Lower Woods & Grassland SLNCI (Benson's Glen), leading to irreplaceable	N/A (Qualitative Assessment Only)					Large Adverse

Newry Southern Relief Road – Blue Route Option 1	**Description** – A 3.20km S2/Wide Single Carriageway Climbing Lane Section links the A2 Warrenpoint Road to the A1/N1 Belfast Dublin Corridor.	**Main Constraints –** The majority of traffic currently passing through Newry converges in the centre of the city, resulting in considerable congestion.	**Total Scheme Cost (Excl. Optimism Bias) – £40.269m** **Total Scheme Cost (Incl. 36.3% Optimism Bias) – £54.887m**

Objective	Sub-Objective	Qualitative Impacts	Quantitative Assessment	Assessment
		loss of long-established woodland habitat. Additionally, this would fragment this SLNCI. Significant fragmentation would prevent movement of species across the landscape. This route also traverses agricultural land with numerous hedgerows. As Priority Habitat and important wildlife corridors, hedgerow loss would be detrimental, causing habitat fragmentation for local wildlife.		
	Landscape Effects	The river bridge location of Blue Route Option 1 within Greenbank Industrial Estate would likely become a gateway / landmark between the city and the river valley further south-east due to its required high clearing between the bridge and Newry River / Canal. Considering its location within the urban and light industrial southern fringe of Newry, the development would be able to integrate into its urban / light industrial context and would not detract considerably from the overall character in the area Whilst Blue Route Option 1 would have major landscape and visual effects due to significant sections of cut & fill, it has the highest potential to integrate into the environment as it is located in an area of transition between the sub-urban end of Newry and the rural and wooded parts of the river valley. Blue Route Option 1 would have the least amount of embankments facing east towards the Newry River valley when compared with Blue Route Options 2 and 3. Of all Blue Route options, it would result in the greatest amount of sensitive woodland loss and would traverse the LLPA NY114 Newry Canal / River.	N/A (Qualitative Assessment Only)	**Landscape** Moderate Adverse to Large Adverse **Visual** Moderate Adverse to Large Adverse
	Land Use	Would encroach into the settlement development limit as designated in the Banbridge / Newry & Mourne Area Plan 2015, notably affecting a major area of existing open space, effectively resulting in its loss and functionality from a community / recreational perspective (Gerry Brown Park). Would also split an existing area of economic development associated with Greenbank Industrial Estate, however would result in no loss of land from this zoned area (may also improve access). Would directly affect the Newry Canal/River LLPA (NY 114). Would marginally encroach into the most northerly of the three parcels associated with Fathom Lower Woods & Grasslands SLNCI and would also encroach into and sever the central parcel of this SLNCI (Benson's Glen) (including the loss of long-established woodland). All route options would traverse a similar length of agricultural land. Does not include a bascule bridge over the canal at this stage, creating a potential restriction or obstacle to passage for tall ships.	Eight properties at risk of demolition, including five residential properties, one community property and two commercial properties. Seven residential properties at risk of private land loss, with one being subject to moderate adverse impacts and the remainder subject to minor impacts. Six planning applications at risk of direct impacts. For those that are still extant, the impact would be minor.	Slight Adverse – Large Adverse

Newry Southern Relief Road – Blue Route Option 1	**Description** – A 3.20km S2/Wide Single Carriageway Climbing Lane Section links the A2 Warrenpoint Road to the A1/N1 Belfast Dublin Corridor.	**Main Constraints** – The majority of traffic currently passing through Newry converges in the centre of the city, resulting in considerable congestion.	**Total Scheme Cost (Excl. Optimism Bias) – £40.269m** **Total Scheme Cost (Incl. 36.3% Optimism Bias) – £54.887m**

Objective	Sub-Objective	Qualitative Impacts	Quantitative Assessment		Assessment	
	Noise & Vibration	Would have the third highest number of receptors, both within 50m, (the zone where noise levels would be greatest), and within 300m. These are primarily highly sensitive residential receptors. In terms of road gradient, steepest gradient (6%), over the second longest distance. The longer the length of road at this gradient; the higher the potential there is for adverse noise impacts. Would require a significant degree of earthworks (cutting and embankments) and bridge works.	When comparing the Do-Minimum in the Baseline Year (year of opening) with the Do-Something in the Future Year (15th Year) for Blue Route Option 1, 59 properties would experience a less than 10% increase in noise nuisance. 8 would experience a 10-20% increase in noise nuisance and 5 would experience no change. Under this scenario, it is predicted that the 68 dB $L_{A10,\ 18hr}$ value would be exceeded at 7 properties under the 'Do-Something' scenario. It is noted that 6 of these properties would exceed this value under the 'Do-Minimum' scenario due to the existing road network. There are 17 properties which would be exposed to levels in excess of 55 dB $L_{night,\ outside}$ under the 'Do-Something' scenario in the Future assessment year.		Neutral – Large Adverse	
	Vehicle Travellers	New and interesting views would be opened-up. Currently, driver stress levels through the affected road network of Newry are considered to be 'High', and would be expected to reduce on completion of the scheme.	N/A (Qualitative Assessment Only)		Views : Moderate Beneficial Driver Stress: Moderate Beneficial	
	Road Drainage & the Water Environment	Would not directly affect any designated or known shellfishery beds, nor would it directly affect Carlingford Lough ASSI. Bridge crossing point and alignment would minimise the potential for establishment of preferential pathways and sediment release. Would be located within the Q_{100} floodplain. The feeder stream to Bensons Glen Fish Hatchery would be directly affected.	N/A (Qualitative Assessment Only)		Slight Adverse	
	Geology & Soils	Would potentially have less impact on soils as a result of its being partially within urban and disturbed soil types and shorter overall length. However, its partial location within the urban area would increase the potential to encounter contaminated soils/groundwater (particularly within Greenbank Industrial Estate).	N/A (Qualitative Assessment Only)		Slight Adverse	
ECONOMY	**Transport Economic Efficiency**	Significantly reduced peak and off-peak journey times on the road network in the 2023 year of opening compared to existing routes by avoiding the congested urban road network within Newry City Centre.	**For the Opening Year:**	**RTF 2015 Growth**	**TEE (RTF 2015 Growth)**

	Reliability	Improved journey time reliability through the provision of a Newry Southern Relief Road to address acknowledged operational congestion through Newry City Centre.	N/A – Qualitative Assessment Only						
SOCIAL	**Pedestrians, Cyclists & Equestrians**	Would potentially affect one alleged PROW (at Middlebank) and cross the Ring of Gullion Waymarked Way. The proposed high off-road cycle and walking greenway to be developed along Middlebank would be indirectly impacted in terms of setting. Would impact on existing and proposed National Cycle Networks / Sustrans proposals. No known equestrian facilities would be directly affected. Would impact on the setting/amenity of the Ship Canal as an angling facility. Likely significant reduction in traffic on Kilmorey Street and overall reduction in rat-running.	N/A (Qualitative Assessment Only)					Slight Adverse – Slight Beneficial	
	Accidents	Significant savings in the number of accidents and the number of serious and slight casualties due to the provision of a Newry Southern Relief Road to remove traffic from the heavily trafficked junctions on the urban road network within Newry City Centre, based on the application of national accident characteristics.	**Growth**	**Accidents**	**Deaths**	**Serious**	**Slight**	**Accidents PVB (RTF 2015 Growth)**	
			RTF 2015	129.4	-0.1	13.0	149.1	£4.617m	
	Community Severance	Significant volumes of traffic would continue to be drawn into the city from all directions; however the relief of some of the traffic on the urban road network may improve access to community facilities, with a possible reduction in vehicular/pedestrian conflict due to the slight easing of congestion. The benefit of relieving some traffic and slight easing of congestion may also be experienced throughout the wider network of urban roads which have become heavily used routes by traffic wishing to avoid/bypass the congested areas. Not only may this lead to improved access to community facilities throughout the wider urban area but also partially reduce the degree of community severance. It	N/A (Qualitative Assessment Only)					Slight Beneficial	

Newry Southern Relief Road – Blue Route Option 2	**Description** – A 3.00km S2/Wide Single Carriageway Climbing Lane Section links the A2 Warrenpoint Road to the A1/N1 Belfast Dublin Corridor.	**Main Constraints** – The majority of traffic currently passing through Newry converges in the centre of the city, resulting in considerable congestion.	**Total Scheme Cost (Excl. Optimism Bias) – £53.177m** **Total Scheme Cost (Incl. 36.3% Optimism Bias) – £72.481m**

Objective	Sub-Objective	Qualitative Impacts	Quantitative Assessment	Assessment
		may also serve to encourage journeys into the city by those previously deterred by the high levels of traffic on the city roads.		
	Access to Public Transport	Access to the local road network would be maintained for local Ulsterbus services linking the surrounding towns and villages. The Route would likely result in reduction in delays for public transport services through separation of local and strategic traffic to a certain degree. There would be no long-term impact upon rail services.	N/A (Qualitative Assessment Only)	Slight Beneficial
	Transport Interchange	As a long-term strategic road improvement to link from the A1 Dublin Road (a key strategic route), to the A2 Warrenpoint Road (a trunk road leading to Warrenpoint Port) the provision of a relief road to the south of Newry would provide an obvious benefit to the transport interchanges, particularly with regards to the potential for removal of a significant proportion of port-related HGV movements from the city centre road network. A maximum gradient of 6% occurs for approximately 1.6km. A significant cut along the Fathom Line connector could potentially require blasting. The route would result in a substantial embankment to the west of Fathom Line with slope lengths up to 70m. Flagstaff Road would require realignment in order to gain sufficient clearance for an overbridge.	N/A (Qualitative Assessment Only)	Moderate Beneficial
	Land-Use Planning	Conforms to policies in the RDS, RTS and RSTNTP. Specifically the route would help achieve the strategic aims of the RDS (2035) and conforms to its specific regional guidance; to deliver a balanced approach to transport infrastructure. The route would help maximise the potential of the RSTN, by removing bottlenecks on the key road network where lack of capacity is causing congestion and improving the environment by providing bypasses, relieving the effects of heavy through traffic. The scheme is part of the Strategic Road Improvement Programme, and is currently in DfI's 10 year Forward Planning Schedule, as of April 2015.	N/A (Qualitative Assessment Only)	Slight Adverse - Moderate Beneficial
	Other Government Policies	The scheme is supported by proposals contained within the Banbridge/Newry and Mourne Area Plan 2015 and the Newry City Masterplan, which in turn are largely in conformance with other Government Department Objectives for integrated transport.	N/A (Qualitative Assessment Only)	Moderate Beneficial
PUBLIC ACCOUNTS	**Affordability**			(Excl. Optimism Bias) – £53.177m (Incl. 36.3% OB) – £72.481m

Newry Southern Relief Road – Blue Route Option 3	**Description** – A 3.00km S2/Wide Single Carriageway Climbing Lane Section links the A2 Warrenpoint Road to the A1/N1 Belfast Dublin Corridor.	**Main Constraints** – The majority of traffic currently passing through Newry converges in the centre of the city, resulting in considerable congestion.	**Total Scheme Cost (Excl. Optimism Bias) – £43.468m** **Total Scheme Cost (Incl. 44% Optimism Bias) – £59.247m**

<table>
<tr><th>Objective</th><th>Sub-Objective</th><th>Qualitative Impacts</th><th>Quantitative Assessment</th><th>Assessment</th></tr>
<tr><td rowspan="4">ENVIRONMENT</td><td>Air Quality</td><td>Blue Route Option 3 is forecasted to have a beneficial local air quality effect by removing a proportion of traffic, (particularly HDVs) from the city centre, leading to less congestion and reduced pollution. Two existing AQMAs would be indirectly affected as a result of removal of some strategic traffic from the city. However, the change would likely not be significant enough to result in the AQMAs being revoked. The route option would have no perceptible impact upon designated ecological sites.
NO_2 and PM_{10} levels at each assessed receptor would be 'Well Below' the NAQS limit values and the significance of effect in all cases would be Negligible, irrespective of the absolute adverse or beneficial change concentrations. The route option would also result in a decrease in regional emissions.</td><td>Number of properties within 200m of indicative alignment centreline:
<table><tr><th>Centreline – 50m</th><th>50-100m</th><th>100-150m</th><th>150-200m</th><th>Total</th></tr><tr><td>16</td><td>11</td><td>29</td><td>52</td><td>108</td></tr></table></td><td>Slight Adverse – Slight Beneficial</td></tr>
<tr><td>Cultural Heritage</td><td rowspan="3">Blue Route Option 3 has the possibility of impacting upon a record-only Belvedere Tower (HB16/13/009) associated with Ashton House; the former lines of the Industrial Heritage Record GNR Branch Line from Goraghwood to Warrenpoint (00478) and the Newry and Greenore Railway (00538); and the boundary between the townlands of Cloghogue and Fathom Lower.
It could also impact upon the settings of the scheduled Newry Canal; the bridge carrying the Barracric Road over the Belfast-Dublin railway line; Fathom House and its associated Belvedere Tower; and the listed church at Cloghogue.</td><td>Five low value assets would be at risk of direct physical impact, as detailed under qualitative impacts.

Three assets of unknown value would be at risk of direct physical impact, including a possible area of complex field boundaries, areas of palaeoenvironmental potential, the possible site of a 19th Century building, Wellington Inn and previously unrecorded archaeological features and deposits within greenfield areas.

Blue Route Option 3 also has the potential to impact upon the setting of a range of heritage assets, including the Newry Ship Canal; the B+ listed Church of the Sacred Heart (and associated B1 listed gates and walling and its non-designated Parochial House); the high value B1 listed Fathom House and its associated high value B2 listed Belvedere Tower; the low value Record-Only Ashton House (HB16/13/028); the Industrial Heritage Record railway bridge on the GNR Main Line (00062:102:00) which is also a Record-only Historic Building (HB16/13/013) and ancient woodland in Fathom Lower (WT940, WT943).</td><td>Large Adverse</td></tr>
<tr><td>Ecology & Nature Conservation</td><td>Blue Route Option 3 would not directly affect Carlingford Lough ASSI, though would cross the Newry River and canal requiring several bridge piers within the wider channel. The bridging point would also likely affect the scrub habitat, riparian corridor on the canal and intertidal river bank habitat causing fragmentation.
Does not traverse Fathom Lower Woods & Grassland SLNCI, though passes in close proximity to it, affecting undesignated woodland fringe habitat, leaving the remaining woodland habitat more exposed to disturbance and lead to significant habitat fragmentation. This route also traverses agricultural land with numerous hedgerows. As Priority Habitat and important wildlife corridors, hedgerow loss would be detrimental,</td><td>N/A
(Qualitative Assessment Only)</td><td>Moderate Adverse</td></tr>
</table>

Newry Southern Relief Road – Blue Route Option 3	**Description** – A 3.00km S2/Wide Single Carriageway Climbing Lane Section links the A2 Warrenpoint Road to the A1/N1 Belfast Dublin Corridor.	**Main Constraints –** The majority of traffic currently passing through Newry converges in the centre of the city, resulting in considerable congestion.	**Total Scheme Cost (Excl. Optimism Bias) – £43.468m** **Total Scheme Cost (Incl. 44% Optimism Bias) – £59.247m**

Objective	Sub-Objective	Qualitative Impacts	Quantitative Assessment	Assessment
		causing habitat fragmentation for local wildlife.		
	Landscape Effects	The river bridge location of Blue Route Option 3 within Greenbank Industrial Estate would likely become a gateway / landmark between the city and the river valley further south-east due to its required high clearing between the bridge and Newry River / Canal. Considering its location within the urban and light industrial southern fringe of Newry, the development would be able to integrate into its urban / light industrial context and would not detract considerably from the overall character in the area. Would traverse the LLPA NY114 Newry Canal / River. Whilst Blue Route Option 3 would have major landscape and visual effects due to significant sections of cut & fill, it has the greatest potential to integrate into the environment as it is located in an area of transition between the sub-urban end of Newry and the rural and wooded parts of the river valley. Blue Route Option 3 would have extensive embankments facing east towards the Newry River valley.	N/A (Qualitative Assessment Only)	**Landscape** Moderate Adverse to Large Adverse **Visual** Moderate Adverse to Large Adverse
	Land Use	Would encroach into the settlement development limit as designated in the Banbridge / Newry & Mourne Area Plan 2015, notably affecting a major area of existing open space effectively resulting in its loss and functionality from a community/recreational perspective (Gerry Brown Park). Would also split an existing area of economic development associated with Greenbank Industrial Estate, however would result in no loss of land from this zoned area (may also improve access). Would directly affect the Newry Canal/River LLPA (NY 114). Would avoid direct encroachment into Fathom Lower Woods & Grasslands SLNCI. All route options would traverse a similar length of agricultural land. Does not include a bascule bridge over the canal at this stage, creating a potential restriction or obstacle to passage for tall ships.	Seven properties at risk of demolition, including five residential properties, one community property and one commercial property. Eight residential properties at risk of private land loss, with two being subject to moderate adverse impacts and the remainder subject to minor impacts. Six planning applications at risk of direct impacts. For those that are still extant, the impact would be minor.	Slight Adverse – Large Adverse

Newry Southern Relief Road – Blue Route Option 3

Description – A 3.00km S2/Wide Single Carriageway Climbing Lane Section links the A2 Warrenpoint Road to the A1/N1 Belfast Dublin Corridor.

Main Constraints – The majority of traffic currently passing through Newry converges in the centre of the city, resulting in considerable congestion.

Total Scheme Cost (Excl. Optimism Bias) – £43.468m
Total Scheme Cost (Incl. 44% Optimism Bias) – £59.247m

Objective	Sub-Objective	Qualitative Impacts	Quantitative Assessment		Assessment	
	Noise & Vibration	Would have a comparatively high number of receptors, both within 50m, (the zone where noise levels would be greatest), and within 300m. These are primarily highly sensitive residential receptors. In terms of road gradient, steepest gradient (8%). The longer the length of road at this gradient; the higher the potential there is for adverse noise impacts. Would require a significant degree of earthworks (cutting and embankments) and bridge works.	When comparing the Do-Minimum in the Baseline Year (year of opening) with the Do-Something in the Future Year (15th Year) for Blue Route Option 3, 62 properties would experience a less than 10% increase in noise nuisance, 4 would experience a 10-20% increase in noise nuisance, 1 would experience a 20-30% increase in noise nuisance and 4 would experience no change. Under this scenario, it is predicted that the 68 dB $L_{A10,\ 18hr\ value}$ would be exceeded at 9 properties under the 'Do-Something' scenario. It is noted that 6 of these properties would exceed this value under the 'Do-Minimum' scenario due to the existing road network. There are 19 properties which would be exposed to levels in excess of 55 dB $L_{night,\ outside}$ under the 'Do-Something' scenario in the Future assessment year.		Neutral – Large Adverse	
	Vehicle Travellers	New and interesting views would be opened-up. Currently, driver stress levels through the affected road network of Newry are considered to be 'High', and would be expected to reduce on completion of the scheme.	N/A (Qualitative Assessment Only)		Views : Moderate Beneficial Driver Stress: Moderate Beneficial	
	Road Drainage & the Water Environment	Would not directly affect any designated or known shellfishery beds, nor would it directly affect Carlingford Lough ASSI. Bridge crossing point and alignment would minimise the potential for establishment of preferential pathways and sediment release. Would be located within the Q_{100} floodplain. The feeder stream to Bensons Glen Fish Hatchery would be directly affected.	N/A (Qualitative Assessment Only)		Slight Adverse	
	Geology & Soils	Would potentially have less impact on soils as a result of its being partially within urban and disturbed soil types and shorter overall length. However, its partial location within the urban area would increase the potential to encounter contaminated soils/groundwater (particularly within Greenbank Industrial Estate).	N/A (Qualitative Assessment Only)		Slight Adverse	
ECONOMY	**Transport Economic Efficiency**	Significantly reduced peak and off-peak journey times on the road network in the 2023 year of opening compared to existing routes by avoiding the congested urban road network within Newry City Centre.	**For the Opening Year:**	**RTF 2015 Growth**	**TEE (RTF 2015 Growth)**	
			Total Vehicle-Hours Saved (Two-Way):	178,000	**Consumer PVB:**	£55.549m
